

COZMEDIC SURGERY ASSOCIATES

6585 Rochester Road, Suite 103, Troy, MI 48085

DRUGS THAT CAUSE BLEEDING PROBLEMS

Two (2) to three (3) weeks prior to surgery, vitamin E, aspirin or aspirin products and medication containing ibuprofen or naprosyn should be discontinued because they promote bleeding, unless the surgeon tells you otherwise. If possible, also discontinue any prescription, anti-inflammatory medication for pain or arthritis, unless the surgeon tells you otherwise. Additionally, check any herbal or other supplements you may be taking. If you must take something for aches and pains, use acetaminophen (Tylenol) as directed.

PRODUCTS THAT CONTAIN ASPRIN OR IBUPROFEN

Adapin	Coricidin For Children	Limbitrol	Quite World Analgesic/Sleeping Aid
